

METHOD FOR TRANSPORTING FACSIMILE INFORMATION IN  
IP-BASED DATA NETWORKS

ABSTRACT

The invention relates to a method of transmitting data, and in particular facsimile data, of at least one first subscriber to at least one second subscriber, with the subscribers having a real-time communication link, in which the at least one first subscriber establishes a real-time connection to at least one first intermediate station and transmits data to the station, the at least one first intermediate station forwards the data to at least one second intermediate station over a connection which at least in part does not support real-time transmission, and a real-time connection is established between the at least one second subscriber and at least one second intermediate station and the data is transmitted to the at least one second subscriber.
